

IMPORTING MUL / MCARE FILE

- Open **MUL/MCARE** file in **Excel**
 - In **Cell A1** press **Ctrl + z**
 - **Copy & Paste** data into the **Pharmacy Excel File**
 - Select data and **filter** to remove any **cash scripts** under **column N (e.g. PR/PRT/OTC)**
 - **Remove filter**
- **Select data** in worksheet and **sort by date**
- **Separate data** in pharmacy workbook by month (e.g. if working with March and April data in the March file then create a copy of the March worksheet and rename to April, delete all March scripts in April worksheet and all April scripts in March worksheet)
- **Sort data** by **column N (Medical Aid Order)**
- Use **previous months** as a guide to insert **headers** above various medical option codes, grouping multiple codes under the relevant medical aid as appropriate (can also search new/unknown option codes via the internet) , **Separate headers by 3 lines**

CREATING AGE ANALYSIS

- Create copy of **Age Blank** template and rename to applicable month
- In relevant month worksheet (e.g. Mar20) **create sum of total claim values**, you will use this to **double check that your age analysis total is correct**
- Select and **filter data** in relevant month file to **copy and paste medical aid Headers** corresponding age analysis worksheet (delete surplus lines in relevant age analysis worksheet)
- Insert sums of claim amount for each medical aid from relevant month worksheet under column 'Claim Amt) and copy formula across to column 'Admin Fees'
 - In **age analysis** worksheet **enter "=sum()"** in relevant Claim Amount cell
 - In month worksheet use mouse to select relevant data field under Claim column for corresponding medical scheme followed by Enter key
- Check **total claim amount on age analysis** worksheet matches **total claim amount on corresponding month worksheet**
- Sort age analysis medical scheme names in alphabetical order

DOWNLOADING .CSV FILES

- Open **Recon Info file** to access user names and passwords
- Capture administrator/medical scheme name and date of last file downloaded into hard copy book, using previous entries as a guide as to how far back to search and download
- Make sure to check every medical scheme in the drop down boxes for each administrator (e.g. Discovery, Momentum) so no files are missed creating additional queries
- Save .csv files under relevant pharmacy name in Remits folder

IMPORTING CSV FILES

DISCOVERY (Ctrl + Shift + D)

- Open pharmacy file and .csv file
- Scroll to **bottom of .csv file**, copy and paste **banking details** from .csv file to Banking worksheet in pharmacy workbook taking note of medical scheme name at top of file, **remove negative sign from banking totals**
- Go back to .csv file and select **cell A1** and enter **Ctrl + Shift + D**
- Copy and paste data from Sheet1 of .csv file to Disco worksheet of pharmacy workbook
- Close .csv file **without saving** and **move to Backup folder**
- Once all new .csv data has been transferred into the pharmacy file, **sort new data** in columns A and B in **numerical order**
- Drag and drop **formula in column C** to end of new data

GEMS (Ctrl + Shift + W)

- Open pharmacy file and .csv file
- **Banking details** should be entered via **PDF from Gems Site**
- Select **cell A1** and enter **Ctrl + Shift + W**
- Copy and paste data from Sheet2 of .csv file to **MHG worksheet** of pharmacy workbook
- Make sure that **any non-numerical data is excluded**
- Close .csv file **without saving** and move to Backup folder
- Once all new .csv data has been transferred into the pharmacy file, **sort new data** in columns A and B in **numerical order**
- Drag and drop **formula in column C** to end of new data

MEDSCHEME/MEDSHIELD (CTRL + Shift + X)

- Open pharmacy file and .csv file
- Select **cell A1** and enter **Ctrl + Shift + X**
- **Copy and paste data from Sheet3 of .csv file to Med** worksheet of pharmacy workbook
- **Copy and paste banking details** from **Banking worksheet of .csv** file to Banking worksheet of pharmacy file
- Close .csv file **without saving** and move to Backup folder
- Once all new .csv data has been transferred into the pharmacy file, **sort new data** in columns A and B in **numerical order**
- Drag and drop **formula in column C** to end of new data

MOMENTUM (Ctrl + A) / (Ctrl + Shift + A)

- Open pharmacy file and .csv file
- Copy and paste **banking details from .csv file** to Banking worksheet of pharmacy file although it is more accurate in terms of payment dates to draw this information from the pdf when downloading from Momentum's website
- When transferring banking details from Momentum files, **don't forget** to check **totals under Scheme Paid, Primary Care and Health Saver columns**, recording as **separate payments** in the Banking worksheet of the pharmacy file
- Select **cell A1** and enter **Ctrl + Shift + A** for Momentum files **and Ctrl + A** for **Moto, Imperial, Transmed, Wooltru etc.**
- Copy and paste data from Sheet1/Sheet 2 of .csv file as appropriate to MOM worksheet of pharmacy workbook
- Close .csv file **without saving** and move to Backup folder
- Once all new .csv data has been transferred into the pharmacy file, **sort new data** in columns A and B in **numerical order**
- Drag and drop **formula in column C** to end of new data

USING VLOOKUP

Function Arguments ?

VLOOKUP

Lookup_value			= any
Table_array			= number
Col_index_num			= number
Range_lookup			= logical

=

Looks for a value in the leftmost column of a table, and then returns a value in the same row from a column specify. By default, the table must be sorted in an ascending order.

Lookup_value is the value to be found in the first column of the table, and can be a number, a text string, a cell reference, or a formula.

Formula result =

[Help on this function](#) OK Can

- For bigger medical aids with a substantial number of scripts and multiple option codes it is helpful to sort data for the month by script number under the medical aid first before performing this function
- Select **target cell under Paid column** in relevant month of pharmacy workbook
- In **Toolbar** at top of screen **select Formulas**
- Use **dropdown under AutoSum** and **select VLOOKUP** (you may need to select More Functions to access this), alternately select the dropdown under Recently Used
- **Lookup_value** : select **first unpaid script number** under **Rx No. column** of relevant month in pharmacy workbook
- **Table_array** : select **all data** in worksheet for relevant medical scheme in pharmacy workbook (ie Disco, Med, MHG, MOM)
- **Col_index_num** : 3
- **Range_lookup** : false or 0
- **Select OK**
- **Drag and drop formula to end of scripts** for month in pharmacy workbook
- **Delete any #N/A values** (Select all data by highlighting **Top Column** Then **Filter** to show **Only #NA Data** ,then delete them via the **Paid Column**)
- **Correct any #VALUE!** found under **GEMS** by **removing the decimal** being used as a **thousand separator** in the corresponding cell
